

I recently heard that the National Association of Broadcasters (NAB) is petitioning to stop satellite radio (XM Radio) from broadcasting its traffic and weather channels.

I pay for this right by purchasing XM Radio and I am appalled that NAB thinks it can dictate what I am permitted to hear over the airwaves...specifically when it comes to weather and traffic.

I am respectfully urging the FCC to reject the NAB's petition (04-160) and request that the FCC support XM's ability to provide the kind of programming that we are paying to have.

Thank you.
